Evening Summary

Date/Time Stamp: Sunday, September 06, 2015 - 8:25 PM

Weather Summary

Another weather disturbance will move across the northern part of the Great Basin Sunday afternoon/evening. However, this is a relatively weak system and will have little impact. Gusty winds will develop across portions of western Wyoming this afternoon. Combined with low relative humidity, critical fire weather conditions will develop across portions of western Wyoming.

High pressure will begin to build across the Great Basin this week leading to a warming, drying trend. Temperatures will be 5 to 10 degrees above normal by midweek, with the warmest conditions across the western half of the area. Wind speeds will trend downwards through the week as high pressure builds.

Preparedness Levels

Current:

Great Basin	3
National	4

Great Basin Fire Activity: 11 fires for 15 acres (#s from FAMWEB SIT Report)

Large Fire Growth: 4 acres

Large/Emerging Fire Summary:

Resources:

- Competition for resources has decreased and initial attack resources have become more readily available.

Great Basin Fire Potential Summary

Fire danger has decreased significantly across the northern part of the Great Basin where widespread rain along with areas of snow have fallen. However, further south and west, precipitation has not been as widespread and fuels are much drier. With a warming, drying trend forecast to begin in earnest midweek, fire danger will steadily rise.
